# Table of contents

## Plenary lecture
- **Masayuki Miyanishi**
  Manufacturing of light weight cars .................................................. 1
- **Kozo Osakada**
  Application of servo presses to metal forming processes ...................... 9
- **Gerhard Hirt, Stephan Heppner**
  Selected trends for metal forming innovations ..................................... 17
- **Zbigniew Pater**
  Development of cross-wedge rolling theory and technology .................... 25

## Rolling
- **Peter D. Hodgson, Ilana B. Timokhina, Hossein Beladi**
  Nanostructural engineering of steel .................................................. 33
- **Sung-Hoon Cha, Jong-Bong Kim, Sa Sung Park, Jong-Ho Kim, Nak-Kyu Lee**
  Design of micro pattern forming process on thin sheet metal for electronic device panels ..................... 39
- **Joerg Brecht, Peter Finge, Andreas Hauger**
  Tailor rolled products – Innovative lightweight design technology for body structures and chassis applications ........................................... 43
- **Shigeru Ogawa, Kenji Yamada, Toshiyuki Shiraishi, Takayuki Otsuka, Yutaka Sadano, Hisataka Uto, Kazuto Yamamura, Yoshiaki Shia, Kenji Sorao, Takeo Hoshino, Kunihiko Wakatsuki, Kouichiro Takeshita, Keishiro Ikeda, Kanji Hayashi, Akira Sako, Yutaka Matsuda, Toshiro Ikimoto, Hideo Furumoto**
  Development of intelligent mill and realization of Oita plate leveler ........ 47
- **Zongan Luo, Guangming Xie, Guodong Wang, Guanglei Wang, Hongguang Wang, Lijun Wang**
  Interface of heavy gauge plate by vacuum cladding rolling .................. 51
- **Falko Vogler, Alexander Duschka, Peter Finge**
  Part accuracy of hollow profiles manufactured through flexible roll forming .............................................. 54
- **Bogdan Garbarz, Jaroslaw Marcisz**
  Thermomechanical processing of Al-alloyed structural steel with reduced susceptibility to copper hot brittleness ...................................... 58
- **Dian-yao Gong, Zheng-yi Jiang, Jianzhong Xu, Xianghua Liu, Di Wu**
  Setup models of finishing temperature and rolling speed for hot strip mill ................................................. 62
- **Li Yanmei, Zheng Dongsheng, Zhu Fuxian**
  Effect of finish rolling temperature ranges on microstructure and mechanical properties of hot rolled multiphase steel .................................................. 66
- **Krzysztof Muszka, Bradley P. Wynne, Eric J. Palmiere, W. Mark Rainforth**
  Effect of deformation mode on microstructure evolution in Nb-microalloyed steel ................................................. 70
- **Yun Bo Xu, Yong Mei Yu, Bao Liang Xiao, Guo Dong Wang**
  Microstructural modeling and processing optimization during hot strip rolling of high-Nb steels .............................. 74
- **Fumio Fujita, Takero Watanabe, Hiromasa Shimoyama, Lili Guo**
  Effects of rolling and heat treatment conditions on texture structure and formability of magnesium alloy sheets .................................................. 78
- **Alexander Pesin, Victor Salganik, Denis Pustovoytov**
  Modeling of surface crack form change of continuously cast slabs in roughing rolling at wide strip mill 2000 .............................. 82
Matthias Dünckelmeyer, Christian Krempaszky, Ewald Werner, Gerald Hein, Karl Schörkhuber
Analytical modeling of thermo-mechanically induced residual stresses of work rolls during hot rolling ........................................... 86

Mahan Qwamizadeh, Mahmoud Kadkhodaei, Mahmoud Salimi
Analysis of curvature development in asymmetrical plate rolling in free and forced horizontal entry conditions ............................ 90

Shinya Kanemori, Hideaki Furumoto, Kanji Hayashi, Takao Owada
Reduction of impact force in threading of strip front end and stabilization of mill vibration by mill stabilizer device in hot rolling ......................... 94

Yasumitsu Kondo
Suppression of surface hot shortness caused by copper in hot-rolling .......................................................... 98

Dongbin Wei, Junxia Huang, Aiwen Zhang, Zhengyi Jiang, Kiet Tieu, Xu Shi, Sihai Jiao, Libin Chen
Deformation of oxide scale and roll-strip interface characteristics in hot rolling of stainless steel 304 ................................. 102

Victor Mendoza
FEM analysis of defects and microstructure evolution during hot working of specialty alloys ..................................................... 106

Zicheng Zhang, Fuxian Zhu, Yanmei Li, Zhigang Liu
Effect of thermomechanical processing on ferrite grain size and retained austenite morphology of Si-Mn TRIP steel ...................... 110

Akio Segawa, Takao Kawanami
Visualization of deformation characteristics of oxide scale in hot rolling process by scale transfer method ........................................ 114

Ui Gu Kang, Shin Woong Jeong, Won Jong Nam
Evolution of microstructure and mechanical properties in Al 5052 alloy during warm rolling ..................................................... 118

Marcel Graf, Rudolf Kawalla
Simulation system for fast analysis of multistage hot rolling processes strip and rod/wire ..................................................... 122

Masanori Kobayashi, Tomoya Tsuchihashi, Yoshio Morimoto, Takashi Ishikawa
Prevention of sheet perforation in universal gap rolling ....... 126

Somrerk Chandra-ambhorn, Thanasak Nilsonthi, Yves Wouters, Alain Galerie
Oxidation kinetics, mechanical adhesion and pickling behaviour of thermal oxide scales on hot-rolled conventional and recycled steels ............................... 130

Qiang Zhu, Hongtao Zhu, Kiet Tieu, Cheng Lu
High temperature oxidation behaviour of a high-speed steel material ........................................................................... 134

Xiaoming Zhang, Zhengyi Jiang, Dongbin Wei, Xianghua Liu, Guodong Wang
Analysis of casting roll during twin-roll thin strip casting ........ 138

D. Mirahmadi Khaki, A. Akbarzadeh, A. Eftekhar, K. Koroshfar
Coiling temperature effect on formability of Nb-microalloyed steel sheet ................................................................. 142

Yongfeng Shen, Wenyong Xue, Yanhui Guo
Effect of cold rolling and annealing on texture evolution and mechanical properties of IF steel sheet ........................................... 146

Haibo Xie, Zhengyi Jiang, Daniel Yuen
Analysis of edge cracks initiation and propagation during cold rolling of thin strip .......................................................... 150
Mahmoud Salimi, Mohammad Mehdi Sahebifard
Optimization of strip profile and flatness using hybrid neural-GA algorithm .......................................................... 154

Hiroshi Utsunomiya, Tsuyoshi Yukimoto, Tetsuo Sakai, Shinsuke Suzuki, Hideo Nakajima
Pore closure in multi-pass cold rolling of lotus-type porous copper ........................................................................ 158

Mohammad Reza Niroomand, Mohammad Reza Forouzan, Mohammad Fasihfar, Mahmoud Salimi
Chattering control based algorithm for nonlinear optimization of 5-stands cold strip rolling process parameters .......................................................................................................................... 162

Sang Min Byon, Jae Hyeon Lee, Youngseog Lee
Experimental and numerical studies of edge cracks of a silicon steel strip in cold rolling ........................................ 166

Jari Larkiola, Jari Nylander, Martti Verho, Mika Judin
Virtual rolling quality system for cold rolling .......................................................... 170

Amir Hosein Sakhaei, Mahmoud Salimi, Mahmoud Kadkhodaei
Caliber design in shape rolling by finite element method .......................................................... 174

Fritz Klocke, Björn Feldhaus, Hagen Wegner, Vladimir Bäcker
Rolling of defined riblet structures on compressor blades of Ti6Al4V .......................................................... 178

Hiroshi Ona, Ryuhou Sho, Takuo Nagamachi, Kiyomasa Hoshi
Development of flexible cold roll forming machine controlled by PLC .......................................................... 182

Keinosuke Iguchi, Kazuki Nishida, Takayuki Hama, Hideyuki Nakamura, Yukihisa Kuriyama, Hirohiko Takuda
Finite element analysis of strip deformation in roll forming of electric resistance welded pipe with vertical rolls .......................................................................................................................... 186

Radoslaw Patyk
Theoretical and experimental basis of regular asperities about triangular outline embossing technology .......................................................... 190

Toshifusa Nakamizo, Ichiro Takasu, Morihiko Nakasaki, Hiroshi Utsunomiya
Three-rolls-type hot ring rolling process of large seamless rings ........................................................................ 194

Lianggang Guo, He Yang
Numerical simulation of inhomogeneous deformation in cold ring rolling .......................................................... 198

Hendrik Schaftall, Christian Barth
An innovate approach to automated simulation of full 3D ring rolling process and other incremental forming processes .......................................................................................................................... 202

Jaroslav Bartnicki, Jaroslav Magryta, Zbigniew Pater, Grzegorz Samolyk
Rotary compression processes of hollowed parts ........................................................................ 206

Abdullatif Al-Salmi, Peter Hartley
The influence of roll inclination angle in three-roll rotary rolling of bi-metallic rod ........................................................................ 210

MinCheol Lee, SooJin Jang, SeungSang Han, DukJae Yoon, ManSoo Joun
New finite-element model of thread rolling ........................................................................ 214

Agnieszka Kulakowska
Problems of surface preparation under burnishing rolling in aspect of product quality ........................................................................ 218

Wang Baoyu, Zheng Zhenhua, Hu Zhenghuan, Lin Jianguo
Methodology on precision cross wedge rolling of camshaft ........................................................................ 222

Carolin Binotsch, Andreas Feuerhack, Birgit Awiszus, Heinrich Potthoff
FEM simulation of planetary cross rolling process for production of seamless tubes of steel and copper .... 226
Matthias Schmidtchen, Rudolf Kawalla
Multiscale modeling of rolling processes and bond strength development for layered materials. .... 230

Masahiro Saito, Motoo Asakawa, Yoshifuru Sunaga, Masaru Kobayashi, Masahito Kato, Kunio Matsuzaki
Manufacturing of Mg/Al clad sheet with pure titanium foil as inserts by hot pressing and rolling .... 234

Tamer El Nadi, Bernd-Arno Behrens, Richard Krimm
Simulation of levelling with adjustable roll bending. .................................................. 238

Motoo Asakawa, Motohiko Urabe, Kotaro Nishimura, Ryota Hamada, Shigeyuki Aizawa, Masahiko Amari
Theoretical and experimental analysis of roller leveller straightening for coiled bar ............... 242

Zdzislaw Cyganek
Influence of induced strain path on force-energy parameters of rolling process .................. 246

Forging
SeungSang Han, JaeGun Eom, SoonTae Ahn, SeongMin Jang, YoHun Son, Hyuk Kim, DukJae Yoon, ManSoo Joun
Plastic deformation behavior of pre-heat-treated high-strength steel for application in forging ..... 250

Koh-ichi Sugimoto, Junya Kobayashi, Goro Arai
Development of ultra high-strength low alloy TRIP-aided steel for hot-forging parts ............. 254

Shiro Torizuka, Eijiro Muramatsu
Formability of ultrafine-grained steel : Forming microscrews by cold heading and rolling .......... 258

Sylwia Wiewiórowska
Determination of content of retained austenite in steels with TRIP effect deformed at different strain rates ........................................................... 262

Qiushi Li, JaeGun Eom, YeongSu Kim, EungZu Kim, ManSoo Joun
Causes of die fracture in automatic multistage cold-forging of high-strength ball-studs .......... 266

Yuji Kume, Makoto Kobash, Naoyuki Kanetake
Refinement of grains and second phases in aluminum alloys by compressive torsion processing . 270

Jabłońska Magdalena, Bednarczyk Iwona, Bernstock-Kopaczyńska Ewelina
Microstructural analysis of alloys from Fe-Al system by means of electron back scatter diffraction 274

XiaoWu, Jian-Jun Li, Zhi-Zhen Zheng, Hua-Min Zhou
Formability of Zr-based bulk metallic glass under different loading modes ....................... 278

Zhichao Sun, He Yang, Xiaofeng Guo
Modelling of microstructure evolution in AISI 5140 steel triple valve forming under multi-way loading ................................................................. 282

Joseph Sehinde Ajiboye, Ki- Ho Jung and Yong- Taek Im
Selection of cold forging lubricants by tip test ........................................................... 286

Marcus Biströn, Bernd-Arno Behrens, Hanno Paschke
Reduction of wear by boron based multilayer coatings on forging dies ............................. 290

Soo-Young Kim, Satoshi Kubota, Masahito Yamanaka
Tool life evaluation of cold forging dies using numerical prediction model based on fatigue characteristics of tungsten carbide ................................. 294

Jong-Taek Yeom, Jee-Hoon Kim, Jeoung-Han Kim, Jae-Keun Hong, Jae-Sik Lee
Hot forging design of cam for vessel engine using finite element analysis and ductile fracture criteria ................................................................. 298

Grzegorz Samołyk, Jarosław Bartnicki, Andrzej Gontarz
Fracture model for FEM modelling of cold metal forging ............................................. 302

steel research int. 81 (2010) No. 9
Elena Lyamina, Sergei Alexandrov, Dragisa Vilotic, Dejan Movrin
Effect of shape of samples on ductile fracture initiation in upsetting .......................... 306

Jung Min Seo, Jeong Hoon Noh, Beong Bok Hwang
Sensitivity of dimensional changes to ring geometry using FE simulation. ............... 310

Seong-Hoon Kang, Sang-Woo Kim, Young-Seon Lee
Application of modified hydrostatic stress model to internal void crushing in forging of large-scale ingot. .................... 314

Thomas Kroiss, Ulf Engel, Marion Merklein
Simulation-based determination of deflection characteristic of tooling system and its modeling in FE simulation of cold forging process ................. 318

Takashi Ishikawa, Yoshinori Yoshida, Nobuki Yukawa, Michiaki Kamiyama,
Hirotaka Ogitani, Tomoaki Suganuma
Cold forge bonding of steel and aluminum alloy ............................................... 322

Huachang Wang, Hongfu Wang, Yuxi Tang
Variation in temperature distribution of die from unsteady to steady states in hot-forging of car front-wheel-hub ........................................... 326

Cheng Xiu-quan, Huo Yu-lin, Xia Qin-xiang, Kuang Bei-gu, Cheng Wen-xuan
Closing of central cavity in shaft heavy forging ................................................. 330

Predictions of maximum forging load and initial billet’s dimensions of near net-shape of near net-shape bevel gear forging ................... 334

Satoru Kuwaharada, Kenji Nakanishi, Takehiko Matsuda, Yasumichi Matsumoto
Net shape forging of light weight LED light housing developed by physical forming simulation .................. 338

Wei-Shin Lin, Chun-Feng Tseng
Effect of hot forging deformation rate to carburizing treatment for hot forging parts ........ 342

Hanns Kache, Rouven Nickel, Bernd-Arno Behrens
Development of variable warm forging process chain ........................................ 346

Bernd-Arno Behrens, Dirk Odening
Material influence on shrinkage behaviour of precision-forged parts .................. 350

Tomoyoshi Maeno, Hiroyuki Fujii, Ken-ichiro Mori, Masahiro Sato
Control of slide motion in hot impression die forging of aluminium alloy billets using servo press ................... 354

Gontarz Andrzej, Pater Zbigniew, Samołyk Grzegorz, Tofil Arkadiusz
Forging of connecting rod without flash ....................................................... 358

Emi Onodera, Yunping Li, Tadayoshi Odahara, Hiroaki Matsumoto, Akihiko Chiba
Intelligent hot forging process of artificial hip joint made of Ni-free Co-29Cr-6Mo-0.12N alloy .................. 362

Zhang Bao-hong, Zhang Zhi-min
Theoretical analysis and experimental verification of tooth parameters of die cavity for cold sizing process of spur gear ................................. 366

Yunping Li, Emi Onodera, Tadayoshi Odahara, Hiroaki Matsumoto, Akihiko Chiba
Friction correction of deformation curves in hot forging process of cylindrical sample .................. 370

Fanjuan Meng, Carl Labergere, Pascal Lafon
Parameters optimization of metal forming process ............................................. 374

Takahiro Ohashi, Yusuke Tsurumi, Yasushi Murata,
Heihachi Ueki, Soju Matsumoto, Kenji Iwata
VR system for aiding preform design of hot forgings using haptic device ................ 378
Mohammad Kazem Kouroshfar, Daavood Mirahmadi Khaki
Investigation of effects of thermomechanical processing parameters on restoration behavior in X210Cr12 steel ....................................................... 382

K Zhu Chun-dong, Cheng Meng-biao
Optimization of tie-bar end forming process ........................................... 386

Extrusion and drawing

Byung-Min Kim, Seon-Bong Lee, Sang-Kon Lee
Curved profile extrusion process for Al6xxx automotive suspension arm ................................................................. 390

Beong Bok Hwang, Jeong Hoon Noh, Ho Yong Lee
Forming load characteristics in combined extrusion process ......................... 394

Vishara Ruchiranga Jayasekara, Jeong Hoon Noh, Beong Bok Hwang
Material flow characteristics of combined tube extrusion process .................. 398

Mario Epler, Wojciech Misoilek
Combined physical and numerical simulation of bimetallic tube extrusion .......... 402

Takeshi Toneyama, Masaya Takahashi
Effect of ultrasonic vibration on metal compression and extrusion .................. 406

Takahiro Ishiguro, Masayuki Yoshimura, Yoshinori Yoshida, Nobuki Yukawa, Takashi Ishikawa
Influence of slide motion on dimensional accuracy in cold backward extrusion by using servo press ............ 410

Kenji Hirota, Kumiko Maeda, Akira Shirai
Forming of stepped shaft by sheet extrusion ............................................. 414

Dyi-Cheng Chen, Ming-Wei Guo, Chih-Hsuan Jao, Ci-Syong You
Use of Taguchi method to study deformation mechanisms during indirect extrusion of seamless tube ......................................................... 418

Farhad Parvizian, Tobias Kayser, Bob Svendsen
Modelling and simulation of dynamic microstructure evolution of aluminium alloys during hot forming processes .................... 422

Isaac Flitta, Terry Sheppard
Prediction of substructure influencing static recrystalisation using FEM analysis 426

Marita Karimi, Faramarz Fereshteh-Saniee, Naeemeh Fakhar
Experimental and numerical parameter studies on plane-strain backward extrusion ......................................................... 430

Jung Min Lee, Jung Hwan Lee, Dae Cheol Ko, Dong Hwan Kim, Byung Min Kim
Application of powder pad and die design with ribbon-shaped chamber for direct extrusion of multi-cell tube using porthole die 434

Jianmin Yu, Zhimin Zhang, Lihui Lang, Baohong Zhang
Influence of plastic deformation on mechanical properties and microstructure of annealed ZL102 alloy ............................ 438

Ya Cui, Zhimin Zhang, Baohong Zhang, Jianmin Yu, Qiang Wang
Effect of multiple plastic deformation on microstructure and mechanical properties of 7A04 ultra-high strength aluminum alloy 442

Ping-Hsun Tsai, Wan-Chi Chang, Guogi Li, Jaebong Yang, Jin Yong Oh, Michael Foster, Wei-Tsu Wu
3-D FEM simulation of aluminum extrusion ............................................. 446

Jeong-Hoon Noh, Beong Bok Hwang
Surface stress profiles and forming limit in radial extrusion .......................... 450

Kai Kittner, Carolin Binotsch, Birgit Awiszus
Models for determination of interface strength and quality of aluminum-magnesium compounds ............. 454
Pawel Kazanowski
Evaluation of fracture surface features in support of extrusion tools design optimization .......................... 458

Akira Yanagida, Keisuke Ishikawa, Kensaku Okazaki, Akira Azushima
Effect of Ti addition on tensile properties of C-Mn steels subjected to ECAE and heat treatment ................. 462

Yan Zhao, Hongzhen Guo, Yongqiang Zhang, Zekun Yao, Zhifeng Shi
Influence of ECAP processing parameters on microstructure of TA15 titanium alloy ................................. 466

Andrzej Rosochowski, Malgorzata Rosochowska, Lech Olejnik, Bert Verlinden
Incremental equal channel angular pressing of sheets ............................................................................. 470

Zhigiewn Gronostajski, Maciej Zwierzchowski, Marek Hawryluk, Tomasz Skubiszewski
Aluminum bronze BA1032 deformed by ECAP .......................................................................................... 474

 Mehmet Okan Görtan, Enrico Bruder, Peter Groche, Clemens Müller
New severe plastic deformation process to produce ultrafine grained materials ....................................... 478

Shinsuke Suzuki, Juan Lobos Martin, Hiroshi Utsunomiya, Hideo Nakajima
Effect of pass route and pass number of equal-channel angular extrusion on structure and strength of lotus-type porous copper ................................................................. 482

Kazunari Yoshida, Shunichi Kikuchi
Alternate drawing of aluminum wires for wiring harness ........................................................................ 486

Michał Wielgus, Janusz Majta, Janusz Lukszcz, Paweł Pačko
Effect of strain path on mechanical properties of wire drawing products .................................................. 490

Sonomi Shirasaki, Motoo Asakawa, Ryosuke Komami, Yuichi Tanaka
Theoretical analysis of high dimensional accuracy in cold wire drawing .................................................. 494

Dae Woon Kim, Sang Kon Lee, Byung Min Kim, Jin Young Jung, Deok Young Ban
Prediction model of axial residual stress in multi-pass high carbon steel wire drawing .......................... 498

Tsuyoshi Furushima, Yuta Noda, Ken-ichi Manabe
Effective heating conditions for high speed dieless tube drawing process ............................................. 502

Janusz Lukszcz, Katarzyna Szaņding, Maciej Rumiński
Drawing process with ultrasonic activation of sectional drawing die perpendicularly to axis of wire subject to deformation ........................................................................................................ 506

**Tube forming**

Jean-Loup Chenot, Elisabeth Massoni, Patrice Lasne
Finite element simulation and optimization of the hydroforming process .............................................. 510

Majid Elyasi, Pouya Zoghipour, Mohammad Bakhshi-Jooybari, Abdolhamid Gorji, Seyed Jamal Hoseinipour, Salman Nowrouzi
A new hydroforming die design for improvement of die corner filling of conical stepped tubes .............. 516

Cong Han, Yongchao Xu, Shijian Yuan, Yong Wang, Shuai Yang
Effect of feeding pressure on hydroforming of crank-shaped tubes with ultra-small bending radius .......... 520

Mehran Kadkhodayan, Ahmad Erfani Moghadam, Mehdi Heidari
Loading path optimization of T-shape tube hydroforming process ...................................................... 524

Atsushi Shirayori, Michiharu Narazaki
Hydraulic bulge forming of small diameter tubes ..................................................................................... 528

Shi-Hong Zhang, An-Ying Yuan, Yong Xu, Ming Cheng
Influence of new hydroforming loading on formability in auto parts manufacturing ............................. 532

Gang Liu, Junyang Peng, Guannan Chu, Shiqiang Zhu, Haitao Xiao, Shijian Yuan
Deformation patterns in hydroforming of thin-walled Y-shaped tube ...................................................... 536
Shen-Yung Lin, Jhih-Cheng Shih
Hydro-formability investigation of bellows with more convolutions ................................. 540

Ghader Faraji, Karen Abrinia
Analytical investigation of metal bellows forming process ...................................................... 544

Shijian Yuan, Xin Liu, Yongchao Xu, Xiaosong Wang, Jun Qi, Xiaojun Sun
Warm hydroforming of aluminum alloy part by axially different heating zones ...................... 548

Vadillo Leire, Pérez Iñaki, Hori Izuru, Zarazua Jose Ignacio, Mangas Ángela, San José Juan, Paar Uwe
Gas forming of boron steel tubes at low pressure - Applasting ................................................ 552

Rainer Steinheimer, Carsten Müller-Bollenhagen, Xuelan Schröder, Martina Zimmermann, Bernd Engel, Hans-Jürgen Christ
Closed-loop control of deformation induced martensite in complex tube forming process for optimized fatigue properties ................................................................. 556

Hasan Khanlari, Majid Elyasi, Mohammad Bakhshi-Jooybari, Abdolhamid Gorji, Behnam Davoodi, Ghorban Mohammad Alinegad
Investigation of pressure path effect on thickness distribution of product in hydroforming process of SS316L seamless tubes ................................................................. 560

Se-Ho Kim, Kee-Poong Kim
Simulation-based process development of tube press forming for coupled torsion beam axle of rear suspension assembly ................................................................. 564

Zicheng Zhang, Ken-ichi Manabe, Fuxian Zhu, Mingya Zhang
Determination of circumferential mechanical properties of TRIP steel tube by ring tensile test ........ 568

Dong-Hak Kim, Man-Bin Moon, Hyo-Sub Kim, Dong-Choon Hur, Jea-Woo Yang
Development of 4-way pipe stress reduction machine for improved submerged arc welding pipe dimensional accuracy and reduced residual stress .................. 572

Heng-Sheng Lin, Chia-Jung Lin, Yuan-Chuan Hsu, Jiing-Herng Lee, Bean-Yin Lee, Yu-Chiang Chen
Feasibility of sinking with rotary swaging for high pressure gas cylinders ................................ 576

Kazuhiro Takahashi, Takashi Kuboki, Makoto Murata, Kouzo Yano
Influence of initial thickness of circular tube in rotary-draw bending adding axial pushing force for suppression of flatness ......................................................... 580

Takashi Kuboki, He Huang, Makoto Murata, Yohei Yamaguchi, Kouichi Kuroda
FEM analysis of tube straightener adopting implicit scheme ...................................................... 584

Sheet metal forming
Beom-Soo Kang, Seong-Chan Heo, Ja-Kyung Ku, Jung-Won Park, Tae-Wan Ku
Multi-stage deep drawing process for rectangular cup with extreme aspect ratio using 3003-H16 aluminum alloy ................................................................. 588

Hu Wang, Guangyao Li
Reduction of wrinkling and crack of sheet forming based on least square support vector regression and cross validation sampling approach ........................................ 592

Woo-Jin Song, Seong-Chan Heo, Young-Seop Byun, Tae-Wan Ku, Beom-Soo Kang, Jeong Kim
Prediction of forming limits considering temperature and strain rate effects for magnesium alloy sheet based on local and diffuse plastic instability conditions .......... 596

Mahmoud Abbasi, Mostafa Ketabchi, Hamid Reza Shakeri, Mohammad Hossein Hasannia
Investigation into formability of tailor welded blank consisted of IF steel sheets with different thicknesses- Experiment and simulation ...................................................... 600
Naoto Hagino, Junichi Endou, Shunji Katoh, Seiji Okudera, Masao Maruyama, Makoto Kubota, Chikara Murata
In-process monitoring for press forming ................................................................. 674
Wei Wang, Gang Zhao, Fazhong Shi
Die surface design CAD software oriented for sheet metal stamping FEM .................. 678
Takashi Nakano
Press machine trends and servo press forming examples ........................................ 682
Yoshikiyo Tamai, Yuji Yamasaki, Akihide Yoshitake, Takaaki Imura
Improvement of formability in stamping of steel sheets by motion control of servo press. 686
Kiyoshi Hasegawa, Atsumori Inada, Naoya Kawachi, Jun-ichi Endou
Effect of parallel control of press with eccentric load .............................................. 690
Wen-Hsiang Hsieh, Chia-Heng Tsai
A novel mechanical press of stephenson type ....................................................... 694
Tsuyoshi Yokosawa, Seiji Kataoka, Takashi Sato, Kenji Tamaoki, Kengo Fujimaki, Tadao Kato
Dry press forming using CVD diamond film coated tool polished by non abrasive ultrasonic vibration polishing ................................................................. 698
Kunio Hayakawa, Kazumi Saito, Tamotsu Nakamura, Shigekazu Tanaka
Detection of tribological condition during sheet metal forming using fractal property of acoustic emission ................................................................. 702
Hyun-Min Lee, Young-Ho Seo, Jae-Nam Kim, Woo-Jin Song, Tae-Wan Ku, Beom-Soo Kang, Jeong Kim
Development of electromagnetic forming apparatus and experimental application to sheet metal forming processes ................................................................. 706
Marek Burdek, Marcin Miczka
Influence analysis of 3D roughness parameters on physical and technological properties of steel sheets ................................................................. 710
Michael P. Pereira, Paul C. Okonkwo, Wenyi Yan, Bernard F. Rolfe
Deformation and frictional heating in relation to wear in sheet metal stamping ................ 713
Dongsheng Li, Liang Wang, Hongyu Luo, Yanwen Lin, Lianfeng Chen
Development on dent resistance testing system for auto-body panel parts ...................... 717
Heng Jian Xu, Yu Qi Liu, Zhi Bing Zhang, Ting Du
Solid-shell finite element method for progressive die forming simulation .................... 721
Reimund Neugebauer, Welf-Guntram Drossel, Lutz Lachmann, Sebastian Hensel, Matthias Nestler
Experimental and numerical study on efficient forming operations of sheet-metal-compounds with integrated piezo-modules ........................................................ 725
Zbigniew Zimniak
Influence of high density electric currents pulses on plastic deformation ...................... 729
Jung Min Lee, Jung Hwan Lee, Dong Hwan Kim, Byung Min Kim
Effect of galvannealing temperatures on frictional characteristic of GA coating in flat-friction test ................. 733
Ali Alavi Nia, Reza Emami
Explosive forming of steel cone using ALE method ................................................ 737
Chul Kim, Beom-Cheol Hwang, Won-Byong Bae
Torsional characteristic and manufacturing process for sleeve spring of torsional vibration damper ............... 741

Analysis of plane strain upsetting by hermitian meshless collocation method ................................................................. 1462

Mohsen Loh-Mousavi, Farhad Teymoori, Ali Etesam
3-D finite element simulation of water jet tube forming process ................................................................. 1466

Keiji Manabe
PSPG rigid-plastic FEM analysis of large deformation in cutting ................................................................. 1470

Mehrdad Foroutan, Rahim Sotoodeh Bahreyni, Mahmoud Farzin
Forward extrusion analysis by rigid-plastic meshless method ................................................................. 1474

Amir Reza Khoei, S. Mohadeseh Taheri-Mousavi, S. Omid Reza Biabanaki, Masood Anahid
An enriched-FEM technique for large frictional contact deformation ................................................................. 1478

Leon Kukielka
New damping models of metallic materials and its application in non-linear dynamical cold processes of metal forming ................................................................. 1482

Xiangyang Cui, Guangyao Li, Gang Zheng, Zhou Fang
Cell-based smoothed radial point interpolation method for contact problems in metal forming analysis ................................................................. 1486
